

As a licensed amateur radio operator continually since 1967, I ever so strongly oppose any attempt to use electrical power lines for transmission of Broad Band services. All data available for review strongly indicates that the HF amateur spectrum as well as the low vhf spectrum would, for all practical purposes, be rendered useless by the implementation of BPL and thus deprive our nation of its backbone in emergency communications in time of disaster or terrorist attack as well as eliminate all future development of new modes of communication in the above-captioned spectra.

Respectfully yours,

Dr. James J. Lawlor, KB2NZ
